Gamut Audio D200i

\$13,990

This 200W solid-state amplifier has much of the liquidity, three-dimensionality, and image density typically associated with tubes as well as the expected virtues of solid-state—tonal consistency, frequency extension, and bass control. It runs relatively cool to the touch, is tonally neutral, produces a deep soundstage, and should be very reliable. Capable of driving most speakers and resolving musical details well, the D200i gives music lovers a healthy portion of what Gamut's even more powerful and highly resolving M250i mono amp sounds like at a much lower price.
